

hd25204a_N_150226pn_rn.s

Notes: Here we provide the single-star model of hd25204a_N_150226pn_rn.s, with the following parameters:

$T_{\text{eff}} = 18000$ K, $\log g = 350$, $v \sin i = 120$ km/s, $v_{\text{rad}} = 80$ km/s

The model fits the major Gaussian shape of the Balmer lines, except for the big component on the left wings, and the small component on the right wing. With the He I/II 4026, the single model fits well. The rest of the He and Mg II lines have large discrepancies between the single model and the lines.
